Assumptions	The user must be ready to play the game and set up his first time requirements.

Test case for each requirement:

Requirement 1:

Test case: Verification of points

- In this process the user point will, be stored in a database and every time the player logs in the point will be displayed with the player game name. Game point will also act like money they can be spent in the shop. The higher the point score the difficult the game mode.

Requirement 2:

Test case 2: Section of player

- The user has an option to select multiple players and this test will be done using a tutorial where players will be taught how to play this game and will be explained all the functionality of this game.

Requirement 3:

Test case 3: Various game feature options

- The music test will start from the beginning. When the player logs in the game will ask the player to select the type of music, he/ she would like to listen through the game. The music will be either played from the default database or the user computer. The second feature connected to this test is the chatting box where players are allowed to talk to each other and comment on the game that they are playing and learn through each other game experience.

Requirement 4

Test Case 4: Saving State:

Once the user saves the profile page, all the information must be stored in the database and signed by the user's security keys.

Requirement 5

Test case 5: Verify Pair:

Once the form data is sent to the server, it must be verified to exist in the database. Upon said verification, this test will pass. Else it will fail and prompt user to Sign-Up or try again.

Requirement 6

Test case 6: Sign up Verify:

This consists of a twostep verification process wherein the new pair of values is added into the database and then verified to be added using a database mechanism. The second part of the process is prompting the user to log-in. If the log-in works, then signup was completed successfully.

Requirement 7

Test Case 7: Descriptions for “Monetization”.

Tournament list test:

The tournament system can be set up by third parties that are approved. This can be a verification list.

Requirement 8

Test case 8: Verification of Ads:

In order to ensure fairness, the ads must be randomized. This can be performed by ensuring that ads are served on a random basis and not targeted.

Requirement 9

Test case 9: Currency Test:

The testing mechanism used will be based on Blockchain, which is good for currency implementations
